Assignment 3 reflection: better-writing

CHEUNG Yuk Yuen, AI Application Trainee, Department of Physics.

Where I found it

The assignment names better-writing. The page is https://skills.sh/forjd/better-writing/better-writing. I used it because the funding table has to keep the source sentences, and only the influence paragraph needed a rewrite.

First use

The draft in outputs/influence_before.md was a generic English paragraph. The rewrite in influence_after.md keeps the industry figures: Kelun-Biotech HK$1.56 billion, REPT BATTERO HK$2.12 billion, Sino-Synergy Hydrogen HK$1.56 billion, Horizon Robotics HK$6.09 billion, RoboSense HK$1.06 billion, 16 biotech listings, five specialist technology listings, and their combined HK$19.8 billion. No amount was added or dropped.

Friction

The skill asks for the reader and for the facts that must not move. If the whole table is handed to it, a funding figure can be reworded. The trigger is therefore limited to the influence paragraph.

Beside the skill from Assignment 2

policy-funding-card decides which sentence enters the table and which HKEX year is the outcome. better-writing decides how the paragraph reads once those facts are fixed. The rule worth keeping is that a rewrite may not add or remove a number that is in the source.

How I would use it at work

After a technical note or a policy summary is checked against the source, I would use it on the explanation I hand to a colleague. It replaces a manual pass that deletes filler. It does not replace the check against the XML or the HKEX page.

What I would change first in a fork

I would add one rule: tables, amounts, dates, and labels are frozen, and only the explanation may change.
